1. The following is an examiner's statement of reasons for allowance:

Regarding claims 1 and 2, the prior art fails to disclose or make obvious a method of resolving photoelectron coupling that results from an operation of a staggered charge coupled device inside a scanner comprising, in addition to the other recited features of the claim, the limitation of "subtracting the quantity of transferred photoelectrons from the first quantity of photoelectrons captured by the optical sensor array to obtain the correct quantity of photoelectrons captured by the optical sensor array during the scanning time t so that correct brightness value for pixels scanned by the optical sensor array is obtained".

Regarding claims 3-5, the prior art fails to disclose or make obvious a method of resolving photoelectron coupling that results from an operation of a staggered charge coupled device inside a scanner comprising, in addition to the other recited features of the claim, the limitation of finding a calibration value for the quantity of photoelectrons obtained during a scanning time interval using a formula as recited in claims 3-5, and using the calibration value to correct a brightness value of pixels scanned by an optical sensor array.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Chen, Spears and Liu et al are cited for disclosing a scanner having a staggered CCD design.
